

## PRODUCT FEATURES

Designed for precise trimming of wallpapers and carpets. Made from aluminum and stainless steel, thanks to which is durable and lightweight. Two edges are used for stable support, while the third edge with an embedded stainless steel strip marks the exact cutting line. Three steps on one of the edges of the support enable the cutting of wallpapers and carpets in three different lengths, i.e. butt joint, with small and large allowance. The length of the strip enables it to be used with most commercially available wallpaper rolls. It has a length scale in centimeters and an opening enabling to hang the tool. The shape of the strip enables it to be used together with a cover strip symbol: 41310.
